

# VINTAGE 2022

---

## DESCRIPTIVE SHEET

---

### WEATHER CONDITIONS

Winter 2022 had a temperature average close to normal, they fluctuate between frosts and spring-like periods. Under these conditions, the vines burst on an average date.

In spring, the summery temperatures enabled the vines to grow early, with flowering starting in mid-May. The summer was dry and hot, ensuring that the grapes ripened well and accumulated phenolic compounds. Thanks to reasonable night-time temperatures, we began harvesting our grapes on 19 September.

### WHITE WINE CHARACTERISTICS

The dry white wines are fruity, with citrus and exotic fruit aromas. The Sauvignons are soft and precise, affirming their typical varietal character.

### RED WINE CHARACTERISTICS

Thanks to our clay-limestone soil, the hydric system has been more regular, and our red wines are exceptional. This year's extreme conditions have allowed us to benefit from favourable conditions for good ripening and the development of phenolic compounds. Our Merlots are fruity and well-balanced, and our Cabernets Francs have an intense aromatic glow and noticeable freshness, giving our wines an extra dimension.
