

VINTAGE 2021

DESCRIPTIVE SHEET

WEATHER CONDITIONS

L'hiver 2021 témoigne d'une importante quantité de pluie et des températures parfois froides ou douces. Le mois d'avril plutôt clément a malheureusement accéléré la pousse de la vigne favorisant le débourrement précoce. Les nuits des 7 et 8 avril se sont avérées historiques. En effet, ses nuits ont été marquées par d'intenses gelées affectant lourdement la récolte. L'été, frais et maussade n'a pas réuni les conditions optimales pour une photosynthèse de qualité. La fin d'été fut plus favorable à la maturation des raisins.

WHITE WINE CHARACTERISTICS

Thanks to the cool summer, the white grapes have retained good acidity and high aromatic potential. This year, our Sauvignon Blanc is vivid, taut and very intense in flavour.

RED WINE CHARACTERISTICS

It was a difficult year for red grapes, with high malic acid levels observed at harvest. Fortunately, thanks to our winemaking techniques, the pH and acid levels were correct after malolactic fermentation. The wines produced are fruity, with a slightly less intense colour than in previous years, but still quite decent. Thanks to our clay-limestone soil, the water supply was more regular, resulting in fleshier, more successful Merlots. Our Cabernet Franc was also successful, being velvety and fragrant and once again playing an important role in our blend.

Nostalgic wine-lovers will appreciate the delicacy and finesse of the old Bordeaux vintages, when the alcoholic strength of the wines did not exceed 14°.
